

Ruby's Flux

Soldering and Tinning Flux

Since 1907, Rubyfluid® has been giving superior results for plumbers and workers in brass, copper, tin, steel and stained glass. Rubyfluid® has met their high demands for a soldering flux that is easy to use and produces strong, neat, and durable joints. Manufactured from the finest materials available, Rubyfluid® causes solder to flow in a thin film, thus saving solder. It adheres quickly and stays you put it.

Stainless Steel Flux

This product met with instant approval when introduced to fabricators, as well as manufacturers of stainless steel. Our Stainless Steel flux has made a previously impossible job an easy one. In tests, Ruby's Stainless Steel Flux stood head and shoulders above all others tested.

No special solder or equipment needed

No objectionable or nauseating fumes

Easier soldering

Stronger joints

Soldering Paste

For those who prefer a paste flux, Rubyfluid® Soldering Paste has no equal. It is guaranteed to meet the most exacting requirements. The attractive red color is distinctive of all Rubyfluid® products and it has all the excellent fluxing qualities of Rubyfluid®.
